GOLLER, Gilbert **WOLFF BREGMAN AND GOLLER** P.O. Box 1352 Jerusalem 91013 **ISRAEL** 

NOTIFICATION OF TRANSMITTAL OF THE INTERNATIONAL PRELIMINARY **EXAMINATION REPORT** (PCT Rule 71.1)

Date of mailing

(day/month/year)

10.01.2001

Applicant's or agent's file reference

126,447 PCT

IMPORTANT NOTIFICATION

International application No.

PCT/IL99/00519

International filing date (day/month/year) 30/09/1999

Priority date (day/month/year)

04/10/1998

Applicant

SHOENFELD, Yehuda et al.

- 1. The applicant is hereby notified that this International Preliminary Examining Authority transmits herewith the international preliminary examination report and its annexes, if any, established on the international application.
- 2. A copy of the report and its annexes, if any, is being transmitted to the International Bureau for communication to all the elected Offices.
- 3. Where required by any of the elected Offices, the International Bureau will prepare an English translation of the report (but not of any annexes) and will transmit such translation to those Offices.

#### 4. REMINDER

The applicant must enter the national phase before each elected Office by performing certain acts (filing translations and paying national fees) within 30 months from the priority date (or later in some Offices) (Article 39(1)) (see also the reminder sent by the International Bureau with Form PCT/IB/301).

Where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary examination report. It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned.

For further details on the applicable time limits and requirements of the elected Offices, see Volume II of the PCT Applicant's Guide.

### Concerning section III:

Claims 14 to 26 relate to subject-matter considered by this Authority to be covered by the provisions of Rule 67.1(iv) PCT. Consequently, no opinion will be formulated with respect to the industrial applicability of the subject-matter of these claims (Article 34(4)(a)(i) PCT).

### Concerning section V:

The present application meets the requirements of Article 33 (2) and (3) PCT: the available prior art neither discloses nor suggests oral tolerance-inducing compositions for treatment of atherosclerosis, heart attack, angioplasty-restenosis or stroke comprising either LDL, Ox LDL, HSP 60/65, β<sub>2</sub>GP-1 or functional derivatives thereof in combination with an oral carrier.

For the assessment of the present claims 14 to 26 on the question whether they are industrially applicable, no unified criteria exist in the PCT Contracting States. The patentability can also be dependent upon the formulation of the claims. The EPO, for example, does not recognize as industrially applicable the subject-matter of claims to the use of a compound in medical treatment, but may allow, however, claims to a known compound for first use in medical treatment and the use of such a compound for the manufacture of a medicament for a new medical treatment.

U.S. Patent No. 5,348,945 discloses a method of combating mortality in a cell or tissue under stress. The method comprises contacting heat shock protein 70 (HSP70) to the cell or tissue in an amount effective to enhance the survival of that cell or tissue. The method may be employed in the combating of atherosclerosis, restenosis after angioplasty and nerve damage in human or animal subjects in need of such freatment. A pharmaceutical composition comprising a therapeutically effective amount of HSP70 in a pharmaceutically acceptable formulation is also disclosed.

Although HSP70 and HSP60 belong to a family of about 24 highly conserved heat shock proteins, they represent two entirely distinct characteristics. Their mechanism, for example, do not appear to act in concert in governing the protection from stressful stimuli.

HSP70 was initially patented because of its pronounced induction during heat exposure and other stressful insults such as ischemic preconditioning. Indeed the overexpression of HSP70 in transgenic animals is associated with protection from stressful hazards.

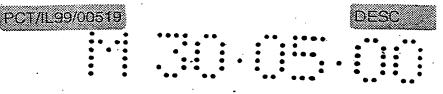

Therefore, U.S. Patent No. 5,348,945 does not teach or suggest the subject matter of the present invention.

### Disclosure of the Invention

Thus, according to the present invention there is now provided an immunological and oral tolerance-inducing composition for prevention and/or treatment of atherosclerosis by the oral administration thereof, comprising an active component selected from the group consisting of modified low density lipoprotein, oxidized low density lipoprotein (Ox LDL), heat shock protein 60/65 (HSP 60/65), beta<sub>2</sub>-glycoprotein-1 ( $\beta_2$ GP-1), functional derivatives thereof and mixtures thereof, in combination with a pharmaceutically acceptable carrier for oral administration.

In an preferred embodiment of the present invention there is provided an immunological and oral tolerance-inducing composition for prevention and/or treatment of a heart attack by the oral administration thereof, comprising an active component selected from the group consisting of modified low density lipoprotein, oxidized low density lipoprotein (Ox LDL), heat shock protein 60/65 (HSP 60/65), beta<sub>2</sub>-glycoprotein-1 ( $\beta_2$ GP-1), functional derivatives thereof and mixtures thereof, in combination with a pharmaceutically acceptable carrier for oral administration.

11

In another preferred embodiment of the present invention there is provided an immunological and oral tolerance-inducing composition for prevention and/or treatment of angioplasty-restenosis by the oral administration thereof, comprising an active component selected from the group consisting of modified low density lipoprotein, oxidized low density lipoprotein (Ox LDL), heat shock protein 60/65 (HSP 60/65), beta<sub>2</sub>-glycoprotein-1 ( $\beta_2$ GP-1), functional derivatives thereof and mixtures thereof, in combination with a pharmaceutically acceptable carrier for oral administration.

In a further preferred embodiment of the present invention there is provided an immunological and oral tolerance-inducing composition for prevention and/or treatment of stroke by the oral administration thereof, comprising an active component selected from the group consisting of modified low density lipoprotein, oxidized low density lipoprotein (Ox LDL), heat shock protein 60/65 (HSP 60/65), beta<sub>2</sub>-glycoprotein-1 ( $\beta_2$ GP-1), functional derivatives thereof and mixtures thereof, in combination with a pharmaceutically acceptable carrier for oral administration.

In even further preferred embodiments of the present invention there is provided an immunological and oral tolerance-inducing composition wherein said active component is a modified low-density lipoprotein, or wherein said active component is oxidized low-density lipoprotein (Ox LDL), or wherein said active component is an active derivative of oxidized low-density lipoprotein (Ox LDL), or wherein said active component is heat shock protein 60/65 (HSP 60/65), or wherein said active component is beta<sub>2</sub>-glycoprotein-1 ( $\beta_2$ GP-1).

The present invention provides an immunological and oral tolerance-inducing composition, wherein said active derivative is lysophosphatidyl choline (LPC).

The present invention also provides an immunological and oral tolerance-inducing composition, wherein said LDL is malondialdehyde LDL (MDA-LDL).

In another aspect of the present invention there is provided a method for prevention and/or treatment of atherosclerosis in a subject, comprising orally administering an immunological oral tolerance-inducing composition comprising an active component selected from the group consisting of modified low density lipoprotein, oxidized low density lipoprotein (Ox LDL), heat shock protein 60/65 (HSP 60/65), beta<sub>2</sub>-glycoprotein-1 ( $\beta_2$ GP-1), functional derivatives thereof and

In a preferred embodiment there is provided a method for prevention and/or treatment of a heart attack in a subject, comprising orally administering an immunological oral tolerance-inducing composition comprising an active component selected from the group consisting of modified low density lipoprotein, oxidized low density lipoprotein (Ox LDL), heat shock protein 60/65 (HSP 60/65), beta<sub>2</sub>-glycoprotein-1 ( $\beta_2$ GP-1), functional derivatives thereof and mixtures thereof, in combination with a pharmaceutically acceptable carrier for oral administration.

In a further preferred embodiment there is provided a method for prevention and/or treatment of angioplasty-restenosis following angioplasty in a subject, comprising orally administering an immunological oral tolerance-inducing composition comprising an active component selected from the group consisting of modified low density lipoprotein, oxidized low density lipoprotein (Ox LDL), heat shock protein 60/65 (HSP 60/65), beta<sub>2</sub>-glycoprotein-1 (β<sub>2</sub>GP-1), functional derivatives thereof and mixtures thereof, in combination with a pharmaceutically acceptable carrier for oral administration.

In an even further preferred embodiment there is provided a method for prevention and/or treatment of stroke in a subject, comprising orally administering an immunological oral tolerance-inducing composition comprising an active component selected from the group consisting of modified low density lipoprotein, oxidized low density lipoprotein (Ox LDL), heat shock protein 60/65 (HSP 60/65), beta<sub>2</sub>-glycoprotein-1 ( $\beta_2$ GP-1), functional derivatives thereof and mixtures thereof, in combination with a pharmaceutically acceptable carrier for oral administration.

In further embodiments of the present invention there is provided a method for prevention and/or treatment of atherosclerosis in a subject, wherein said active component is a modified low-density lipoprotein, or wherein said active component is oxidized low-density lipoprotein (Ox LDL), or wherein said active component is an active derivative of oxidized low-density lipoprotein (Ox LDL), or wherein said active component is heat shock protein 60/65 (HSP 60/65), or wherein said active component is beta<sub>2</sub>-glycoprotein-1 ( $\beta_2$ GP-1).

13

The present invention further provides a method prevention and/or treatment of atherosclerosis in a subject, wherein said active derivative is lysophosphatidyl choline (LPC).

The present invention further provides a method prevention and/or treatment of atherosclerosis in a subject, wherein said LDL is malondialdehyde LDL (MDA-LDL).

The term "functional derivative" as used herein is intended to include labelled proteins, conjugated proteins, fused chimeric proteins and purified receptors in soluble form, as well as fragments, deletions, and conservative substitutions of said proteins.

The existence of an immune response against Ox LDL in atherosclerosis and the correlation between the reaction to Ox LDL and the severity of the disease, in combination with evidence that an active vaccine of Ox LDL in mice and rabbits can prevent the development of atherosclerosis has led the present inventors to conclude that the induction of immune tolerance by feeding Ox LDL to a human subject can result in the reduced rate of atherosclerosis progression. It should be mentioned that the mechanisms of inducing immune tolerance by mouth feeding are possibly mediated via a stimulation and production of cytokine TGFβ and the development of non-specific suppresser T-cells.

The oral tolerization of the present invention may extend to yield a bystandard suppression effect: namely - blocking other (non-antigen specific) autoimmune (anti-self) responses occurring in the vicinity of the atherosclerotic plaque and contributing to its progression.

It should be noted that the aim of the present invention is to induce tolerization or paralyze the immune response towards the HSP65, rather than to achieve mere elevation in the serum to assist protein unfolding.

Therefore, in one aspect the present invention combines oral tolerance, Ox LDL and atherosclerosis, which is a disease caused in part by immune factors. Ox LDL has been reported to induce an immune reaction in mice and rabbits (in contrast to inducing immune tolerance) of Ox LDL antigens and an improvement in the atherosclerosis condition. In these animal models Ox LDL has not been reported to have been experimented with mouth feeding and has never been suggested for oral tolerance.

CLMS

#### WHAT IS CLAIMED IS:

- 1. An immunological and oral tolerance-inducing composition for prevention and/or treatment of atherosclerosis by the oral administration thereof, comprising an active component selected from the group consisting of modified low density lipoprotein, oxidized low density lipoprotein (Ox LDL), heat shock protein 60/65 (HSP 60/65), beta<sub>2</sub>-glycoprotein-1 ( $\beta_2$ GP-1), functional derivatives thereof and mixtures thereof, in combination with a pharmaceutically acceptable carrier for oral administration.
- 2. An immunological and oral tolerance-inducing composition for prevention and/or treatment of a heart attack by the oral administration thereof, comprising an active component selected from the group consisting of modified low density lipoprotein, oxidized low density lipoprotein (Ox LDL), heat shock protein 60/65 (HSP 60/65), beta<sub>2</sub>-glycoprotein-1 ( $\beta_2$ GP-1), functional derivatives thereof and mixtures thereof, in combination with a pharmaceutically acceptable carrier for oral administration.
- 3. An immunological and oral tolerance-inducing composition for prevention and/or treatment of angioplasty-restenosis by the oral administration thereof, comprising an active component selected from the group consisting of modified low density lipoprotein, oxidized low density lipoprotein (Ox LDL), heat shock protein 60/65 (HSP 60/65), beta<sub>2</sub>-glycoprotein-1 (β<sub>2</sub>GP-1), functional derivatives thereof and mixtures thereof, in combination with a pharmaceutically acceptable carrier for oral administration.
- 4. An immunological and oral tolerance-inducing composition for prevention and/or treatment of stroke by the oral administration thereof, comprising an active component selected from the group consisting of modified low density lipoprotein, oxidized low density lipoprotein (Ox LDL), heat shock protein 60/65 (HSP 60/65), beta<sub>2</sub>-glycoprotein-1 ( $\beta_2$ GP-1), functional derivatives thereof and mixtures thereof, in combination with a pharmaceutically acceptable carrier for oral administration.
- 5. An immunological and oral tolerance-inducing composition according to claim 1, wherein said active component is a modified low-density lipoprotein.
- 6. An immunological and oral tolerance-inducing composition according to claim 1, wherein said active component is oxidized low-density lipoprotein (Ox LDL).

- 7. An immunological and oral tolerance-inducing composition according to claim 1, wherein said active component is an active derivative of oxidized low-density lipoprotein (Ox LDL).
- 8. An immunological and oral tolerance-inducing composition according to claim 1, wherein said active component is heat shock protein 60/65 (HSP 60/65).
- 9. An immunological and oral tolerance-inducing composition according to claim 1, wherein said active component is an active derivative of HSP60/65.
- 10. An immunological and oral tolerance-inducing composition according to claim 1, wherein said active component is beta<sub>2</sub>-glycoprotein-1 ( $\beta_2$ GP-1).
- 11. An immunological and oral tolerance-inducing composition according to claim 1, wherein said active component is an active derivative of  $\beta_2$ GP-1.
- 12. An immunological and oral tolerance-inducing composition according to claim 1, wherein said active component is an active derivative of LDL which active derivative is lysophosphatidyl choline (LPC).
- 13. An immunological and oral tolerance-inducing composition according to claim 1, wherein said LDL is malondialdehyde LDL (MDA-LDL).
- 14. A method for prevention and/or treatment of atherosclerosis in a subject, comprising orally administering an immunological and oral tolerance-inducing composition comprising an active component selected from the group consisting of modified low density lipoprotein, oxidized low density lipoprotein (Ox LDL), heat shock protein 60/65 (HSP 60/65), beta<sub>2</sub>-glycoprotein-1 ( $\beta_2$ GP-1), functional derivatives thereof and mixtures thereof, in combination with a pharmaceutically acceptable carrier for oral administration.
- 15. A method for prevention and/or treatment of a heart attack in a subject, comprising orally administering an immunological and oral tolerance-inducing composition comprising an active component selected from the group consisting of modified low density lipoprotein, oxidized low density lipoprotein (Ox LDL), heat shock protein 60/65 (HSP 60/65), beta<sub>2</sub>-glycoprotein-1 ( $\beta_2$ GP-1), functional derivatives thereof and mixtures thereof, in combination with a pharmaceutically acceptable carrier for oral administration.
- 16. A method for prevention and/or treatment of angioplasty-restenosis in a subject, comprising orally administering an immunological and oral tolerance-inducing composition comprising an active component selected from the

25

group consisting of modified low density lipoprotein, oxidized low density lipoprotein (Ox LDL), heat shock protein 60/65 (HSP 60/65), beta<sub>2</sub>-glycoprotein-1 ( $\beta_2$ GP-1), functional derivatives thereof and mixtures thereof, in combination with a pharmaceutically acceptable carrier for oral administration.

- 17. A method for prevention and/or treatment of stroke in a subject, comprising orally administering an immunological and oral tolerance-inducing composition comprising an active component selected from the group consisting of modified low density lipoprotein, oxidized low density lipoprotein (Ox LDL), heat shock protein 60/65 (HSP 60/65), beta<sub>2</sub>-glycoprotein-1 (β<sub>2</sub>GP-1), functional derivatives thereof and mixtures thereof, in combination with a pharmaceutically acceptable carrier for oral administration.
- 18. A method according to claim 14, wherein said active component is a modified low-density lipoprotein.
- 19. A method according to claim 14, wherein said active component is oxidized low-density lipoprotein (Ox LDL).
- 20. A method according to claim 14, wherein said active component is an active derivative of oxidized low-density lipoprotein (Ox LDL).
- 21. A method according to claim 14, wherein said active component is heat shock protein 60/65 (HSP 60/65).
- 22. A method according to claim 14, wherein said active component is an active derivative of heat shock protein 60/65 (HSP 60/65).
- 23. A method according to claim 14, wherein said active component is beta<sub>2</sub>-glycoprotein-1 ( $\beta_2$ GP-1).
- 24. A method according to claim 14, wherein said active component is an active derivative of beta<sub>2</sub>-glycoprotein-1 (β<sub>2</sub>GP-1).
- 25. A method according to claim 14, said active component is an active derivative of LDL which active derivative is lysophosphatidyl choline (LPC).
- 26. A method according to claim 14, wherein said LDL is malondialdehyde LDL (MDA-LDL).
